```python
import socket

def get_ip_address(url):
    try:
        ip_address = socket.gethostbyname(url)
        return ip_address
    except socket.gaierror:
        return None

# Example usage
website_url = input("Enter the website name :-")
ip_address = get_ip_address(website_url)

if ip_address:
    print(f"The IP address of {website_url} is {ip_address}")
else:
    print(f"Failed to retrieve the IP address of {website_url}")
```
